Your Agency

Accessibility monitoring report
www.w3.org/WAI/demos/bad/after/news.html
Oct 5, 2026

Sample report. It uses a real scan of W3C WAI's public “Before” demo page (a fictional site built to show accessibility problems). The agency name is a placeholder; agencies upload their own name and logo.

Summary

2 issues across 1 page · **2** critical or serious

0 critical **2 serious** **0 moderate** **0 minor**

What to fix first

All touch targets must be 24px large, or leave sufficient space

SERIOUS 2 elements · www.w3.org/WAI/demos/bad/after/news.html

Affected: `.inaccessible > .report[href$="news.html"]` `.accessible > .report[href$="news.html"]`

Suggested fix: Make touch targets at least 24 by 24 CSS pixels, or space smaller targets so a 24px circle around each does not overlap another.

```
.icon-link { min-width: 24px; min-height: 24px; padding: 4px; }
```

Automated accessibility scan. Results are informational and may not identify every accessibility issue. This service is not legal advice, a compliance certification, or a substitute for comprehensive manual accessibility testing.

Suggested fixes are general guidance based on the rule that failed; confirm each change in context.
